

ABSTRACT
PORTABLE COMPUTERS

A portable computer arranged to rest comfortably in the hand has a small
5 display screen 5. Accelerometers capable of detecting movement of the pen with
respect to gravity provide input to a microcontroller which selects from a number of
viewing modes a response. The pen may be held in either hand and output
message to the screen will be oriented according to the location of the pen. Full
personal digital assistant functionality may be incorporated in a relatively small
10 plastics casing and functions, such as calendar, contacts and the like may be
incorporated.
